

Commit triage: what the model found

Generated from the triage database by a background job. Every number below is a SQL aggregate over stored verdicts - nothing here is recomputed by hand, and nothing is estimated.

Totals

Commit messages in the database	14
Classified successfully	6
Failed after retries	0
Still pending (from an interrupted job)	8
Recorded a mistake	3
Clean (no mistake)	3

By category

Category	Count	Avg confidence
feature	2	0.8
bugfix	2	0.95
revert	1	1.0
docs	1	0.8

Model vs fallback

A verdict from the keyword fallback means the model could not produce a valid answer in three attempts. A high fallback count is a provider problem, not a data problem.

Source	Count
model	6

Commits that record a mistake

Message	Category	Evidence
Revert "Stage 4: auth middleware and logout e	revert	Revert
Fix mobile overflow on the live page	bugfix	Fix mobile overflow on the live page
Stage 5: 60 clean records collected. Also cor	bugfix	corrects the first run, where the site sends

Slowest calls

Message	ms
Fix mobile overflow on the live page	24364
Stage 5: 60 clean records collected. Also corrects the first run, where the site sends n	10545
Stage 1: signup and login routes working	9545
Add a prefix to every cache key so tenants cannot read each others rows	9394
Revert "Stage 4: auth middleware and logout endpoint"	8911
